# Lastpass Security

Password Manager

## Strong encryption algorithms

We've implemented AES-256 bit encryption with PBKDF2 SHA-256 and salted hashes to ensure complete security in the cloud. You'll create a password manager account with an email address and a strong master password to locally-generate a unique encryption key.

## Local-only encryption

Your data is encrypted and decrypted at the device level. Data stored in your vault is kept secret, even from LastPass. Your master password, and the keys used to encrypt and decrypt data, are never sent to LastPass' servers, and are never accessible by LastPass.

## Multifactor authentication

Multifactor authentication adds extra security to your LastPass account by requiring a second login step before authorizing access to your vault.

## Dark web monitoring

Get alerts if your family's personal information has been leaked or stolen.
